

## **Regional Benefits of Water Supply and Water Quality Act (Water Bond)**

The attached chart lists all of the programs in the Water Supply and Water Quality Act. It shows the eligibility of each region for funding under the individual programs in red, and if the funding is specific to a region, the figure is shown in black. Fisheries improvements in the Central Valley will result in improved water supply for regions reliant on the Delta for water. For this reason, fisheries benefits in these regions are shown in blue. Similarly, Salton Sea restoration will benefit air quality and water supply in Southern California regions outside the Inland Empire. That expenditure is also shown in blue.

Below the chart are the lists of the counties in each region.
